PROBLEM STATEMENT:

Integrating on AI chatbot into a Restaurant

By Integrating an AI chatbot into a website it increases the effectiveness of a website which helps the customer to know more about the features and other information related to online reservations event to interactive AI chatbot can serve several functions like

1. Custom support
2. Handling Reservations
3. Handling customer feedback and reviews
4. Reducing call volumes and operational load

Booking Reminders

Adding booking reminders to a restaurant website can enhance customer experience by reducing no-shows and ensuring guests remember their reservations .It can remind customer by sending a e-mail or SMS messages

ADVANTAGES:

->Increased Visibility and Reach

A website expands the restaurant reach beyond local foot traffic ,helping to attract new customers searching

->Easy access to Menu and Prices

Customers can easily view the menu prices, and other offerings making it more convenient for them to decide if they want to visit or order

->Online Reservations and Ordering

Many website allow for online reservations and orders ,preordering ,seamless experience and saving time for both customers and staff

->Brand Imaging and Reputation

A Well designed website with appealing photos and reviews enhances the restaurant brand image ,by creating a positive first impression

->Customer Engagement

Websites can include newsletters, blogs or social media links that keep customers informed about events ,new menu items ,or special offers by notifying customers about many other updated features regarding restaurant

->Analytics and Customer Insights

Website analytics provide valuable insights about customer preferences ,popular menu items ,and peak visit times, aiding business decisions

DISADVANTAGES:

->Initial and Ongoing costs

Developing and maintaining a professional website involves costs for design ,hosting, updates and sometimes technical support

->Time and Efforts for Updates

Keeping menus ,prices , hours and events updated on the website can regular time and attention

->Technical issues

Websites can experience downtime, slow loading speeds or bugs which may frustrate users and impact customer experience

->Maintenance and Risks

The restaurant ensure data security to protect customer information especially if they handle online payments or reservations

->Competition

A website might not be enough to stand out if competing restaurants have more engaging or interactive online presences like apps or social media profiles

->Limited reach for non-digital users

Some customers especially those not tech-savvy may rely more on word-of-mouthare local advertising rather than finding a restaurant online

Thank you
